N-PSDS (77531).

N-PSDS (77531).

N-PSDS (77531).

Polynclectides and peptides derived from opioid receptor polypeptides - for use in therapeutic compositions and in screening assays for useful drug substances.

Claim 12; Page 236-239; 300pp; English.

The partial amino acid sequence of the novel human kappa opioid receptor. The correspoding gene was isolated from a human brain hippocampus cDNA.

The gene is missing the N-terminal sequence. The C-terminal sequence is very similar to the mouse kappa opioid receptor sequence is very similar to the mouse kappa opioid receptor sequence is C-terminal 293 amino acids, 281 residues are identical and 6 residues have conservative substitutions. The gene encoding the human opioid receptor can be placed in a sultable expression vector for production of
                                                                   Human kappa opicid receptor partial protein.

Per Selective activation of target cell expressing modified G protein per coupled receptor - allows control of cellular proliferation, per sepecially for amplification of transfected cells in gene therapy Example 1: Page 74-76: 117pp: English.

Comprises of protein comprises human kappa opioid receptor (KOR), a comprises: (1) introducing into the cell an neurotransmission. A novel method for selectively activating a target cell (TC) comprises: (1) introducing into the cell a nucleic acid sequence (CC (I) that expresses a G protein-coupled receptor (A) modified to be activated superiorly by a synthetic ligand (RASEL); and (ii) exposing the transfected cell to small synthetic modeleds (B) that corporase associated with receptor activation. (A) has: (a) tesponse associated with receptor activation. (A) has: (a) decreased binding affinity for a selected natural ligand of the native receptor: (b) binding affinity for (B); and (c) is activated by binding (B); sufficiently to produce the required cellular response. Also new are: (1) transgenic cells including the receptor of the genome; (2) cellular implants comprising a cellular product, particularly to response where (1); and (4) transfected with (1); (3) isolated (1); and (4) transfected with (1); (3) isolated (1); and (4) transfected with (1); (3) isolated (1); and contraction of a cellular product, particularly a heterologous therapeutic protein cellular product, particularly a heterologous therapeutic protein cellular product, particularly encoded by a second inserted nucleic acid sequence. Particularly con transfected during gene therapy procedures. Other responses that can be regulated are cell migration and contraction, or pigment contains a sequence animals, expression or stimulation of a second inserted contains a protein contains a production. In transgenic animals, expression or stimulation of a second inserted animals, expression or stimulation of a second inserted contains and contraction or pigment decaped to expend therapy procedures. Other responses 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          disease, seizures, vascular contractions, dementar, neurodegeneration etc., for use as models of these diseases (claimed). The transgenic animals are also used for production of improved food products (e.g. increased calcium content in eggshells or altered fat/lean ratios) or to control fertility or induce labour. A RASSL derived from KOR, designated RASSL OR1 (see W30299), was generated by mutation of the KOR CDNA sequence (see T90998).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    87 ytkmktatniyifnlaladalvtttmpfqstvylmnswpfgdvlckivisidyynmftsi 146

The sequence coding for the human kappa opioid receptor was obtained from two overlapping CDNA fragments isolated from a human placental cDNA library. The fragments were amplified from the library using PCR primers based on the sequence of human genomic clones which hybridised with a murine delta receptor CDNA probe. Nucleotide probes derived from the kappa opioid receptor coding sequence are useful for diagnosis of neurological, cardiovascular and psychiatric disorders associated with opioid receptors. The receptor can be used for identifying e.g. agonists

Selective activation of target cell expressing modulined G protein coupled receptor - allows control of cellular proliferation, especially for amplification of transfected cells in gene therapy. Example 1: Page 77-79; IlTyp; English.

This polypeptide comprises the human G protein-coupled kappa opioid receptor (KOR) (see also W30297) flanked by N- and cellular sequences that facilitate the detection and purification of recombinant KOR, and especially KOR RASSIS (see W30299), i.e. a receptor activated superiorly by a synthetic ligand. A novel method for selectively activating a trayet cell (TC) comprises: (i) introducing into the cell a nucleic acid sequence (I) that expresses a RASSI (A) and (ii) exposing the transfected cell to small synthetic molecules (B) that bind to and activate (A), inducing the G protein coupled cellular response affinity for a selected natural ligand of the native receptor; (b) sociated with receptor activation. (A) has: (a) decreased binding affinity for a selected natural ligand of the native receptor; (b) binding affinity for (B); and (c) is activated by binding (B) sufficiently to produce the required cellular response. Also new are: transgenic cells including theterologous (I); in the genome; cellular implants comprising a TC transfected with (I); isolated (I); and transgenic cells including preceded with (I); isolated (I); and transgenic animals expressing (A). Activation of a cellular product, particularly a heterologous cells that are successfully transfected during gene therapy procedures. Other responses that can be regulated are cell contraction, or signment production. In transgenic animals, symptoms of bone disease, seizures, vascular contractions, dementia, neurodegeneration etc., for use as models contractions of improved food products (e.g. increased calcium ferrities of there inhure laborated active (E). In the second increased contraction of improved food products (e.g. increased column

Transgenic animals defective in one type of opioid receptor - used to identify agents for treatment of pain, drug addiction and transplant rejection, lacking side effects of known opiate(s).

Disclosure; Fig 13, 58pp; French.

This sequence represents the mouse kappa opiate receptor. The gene sequence is used to generate a transgenic non-human mammal for identifying agents for treating disorders associated with opiate receptors. In the mammal, the expression of the gene encoding the opiate receptor is modified, particularly by the deletion of an exon and/or insertion of a marker gene, e.g. the neomycin resistance gene, into the sequence. Especially the expression of the gene is altered in nervous tissue. The agents are potentially useful for treating severe pain (chronic or acute), drug addiction and/or prevention or treatment of transplant rejection (as immunosuppressants). The method may isolate and identify powerful analgesics that lack morphine-like
                                                                                                    Mouse, kappa opiate receptor; transgenic animal; mammal; identification; exon; nervous tissue; pain; drug addiction; transplant rejection; immunosuppressant; analgesic; morphine; side effect.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       17-AUG-1995 (first entry)

For screening assays for useful drug substances.

Claim 8; Page 207-211; 300pp; English.

The amino acid sequence of the novel mouse kappa opioid receptor mork1.

The amino acid sequence of the novel mouse kappa opioid receptor mork1.

The amino acid sequence of the novel mouse brain copy library using a fragment (amplified from the conserved sequences present in the copies. The primers are based on the conserved sequences present in the comber. The primers are based on the conserved sequences present in the comber. The primers are based on the conserved sequences present in the couptor subtypes SSTR1, SSTR2 and SSTR3. The 1.2 kb Pst1 fragment from the mouse kappa opioid receptor clone, lambda msl-1, was subcloned into the CMV copy promoter-based expression vector pcWV-6b. The resultant construct pcWV-msl-1 was transfected into COS-1 cells for protein production. The gene encoding the opioid receptor can be used to produce complete.

Crumcated or chimacric opioid receptor proteins. The opioid receptors thus produced are useful for the development of novel assays designed to select or improve substances, capable of interacting with the opioid receptor protein says designed to receptor proteins, for use in diagnosis, drug design and therapeutic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             01-DEC-1995 (first entry)
mammalian kappa opioid receptor protein.
Mammalian kappa opioid receptor: mouse delta opioid receptor; analgesic; amplification; primer; rat; probe; E.coli; RT-PCR; hypnotic compound; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                     ij

Claim 2; Page 9-10; 15pp; Japanese.

The amino acid sequence of the novel mammalian kappa opioid receptor. The amino acid sequence of the novel mammalian kappa opioid receptor. The gene was isolated by amplifying a fragment from rat brain mRnA by reverse transcriptase-PCR (RT-PCR) using primers Q86726-7 derived from the mouse delta-opioid receptor gene. This fragment was aloned into the plasmid pRII to produce pRII. The plasmid pRII was used to probe a rat brain DNA library in lambda ZAPII to obtain a clone of the rat kappa opioid receptor gene, designated pKOPR2. This clone was introduced into E.coli JM109 for production of the receptor protein. The receptor protein peptides and proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ٠.

CC This protein coupled kappa opioid receptor (KCR) (see also W30297)

CC modified at 17 amino acid positions to contain the corresponding amino acid of the delta opioid receptor (KCR) (see also W30297)

CC Terminal flanking sequences that facilitate the detection and purification of recombinant protein. A movel method for selectively activating a target cell (TC) comprises: (1) introducing into the cull and (ii) exposing the transfered cell to small synthetic molecules (B) that bind to and activate (A), inducing the G protein coupled cellular response associated with receptor activation. (A) has: (a) decreased binding affinity for (B); and (C) is activated cellular implants comprising a TC transfected with (I); collular response.

Also new are: transgenic cells including heterologous (I) in the compressing (A) results, in vitro or in vivo, in cellular product, particularly a heterologous (I) in the response. Collular product he relatively few collular and that are successfully transfected duting few cells that are successfully transfected duting few cells cells and cellular product, particularly and cell cellular product. Particularly and cellular product. Particularly and cellular product. Particularly few cells cellular product and cellular product particularly decreased cellular product. Particularly decreased cellular product cellular product particularly decreased cellular product particularly decreased cellular product.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Transgenic animals defective in one type of opioid receptor - used transgenic animals defective in one type of opioid receptor - used transgenic for treatment of pain, drug addiction and transplant rejection, lacking side effects of known opiate(s) bisclosure; Fig 11; 58pp; French.

This sequence represents the mouse mu opiate receptor. The gene sequence is used to generate a transgenic non-human mammal for identifying agents for treating disorders associated with opiate receptors. In the mammal, the expression of the gene encoding the opiate receptor is modified, the expression of the gene encoding the opiate receptor is modified, gene, e.g. the neonycin resistance gene, into the sequence. Especially the expression of the gene is altered in nervous tissue. The agents are potentially useful for treating severe pain (chronic or acute), drug addiction and/or prevention or treatment of transplant rejection (as immunosuppressants). The method may isolate and identify powerful

Claim 2: Fig 9; 39pp; English.

Claim 2: Fig 9; 39pp; English.

R65188 is the rat mu-subtype opioid receptor protein purified from rat brain membranes, with biotinyl-b-endorphin (R6666) as its ligand. It is encoded by the nucleotide sequence 079199 which was synthesised using 071022 and 071023 as PCR primers.

R65188 is useful for identifying othe receptor subtypes, for screening new opioid ligands, and for studying mechanisms of
                                                                                                                                                                                                                                                                                                                    'note≈ "Threonine residue especially favourable

HWOR CDNA was obtd. from a human cerebral cortical cDNA library screened with fragments of a rat mu opiate receptor. The encoded protein showed homology to rat mu, delta and kappa opiate receptors (R76781-83).

A 365 bp fragment of the mouse delta opioid receptor was used to screen a rat brain cDNA library under low stringency conditions. One positive clone included the sequence given in Q89222, encoding mu opioid receptor, MOR-1 (R71964). MOR-1 was stably expressed in Sequence 398 AA;

diagnosis, treatment and drug screening.

Claim 4; Page 211-214; 266pp; English.
A cDNA library constructed from human caudate nucleus mRNA was screened with rat mu opioid receptor cDNA under conditions of low stringency. One positive clone included the sequence given Q89226, encoding a mu opioid receptor MOR (R71964). The cDNA is used for prodn. of recombinant MOR, in gene therapy, etc. Sequence 400 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New nucleic acid encoding new human mu opioid receptor - and related vectors, transformed cells, antibodies etc., useful in

New DNA encoding human mu opiate receptor - used esp. for screening cpds. for activity as opiate agonists or antagonists of claim 1; Page 25-26; 49pp; English.

HORS DNA WAS obtd. from a human cerebral cortical cDNA library creened with fragments of a rat mu opiate receptor. Expression of hMORI in COS cells revealed high affinity recohnition of the mu opiate specific ligand. Recombinant hMORI can be used to screen
                                                                                                                    240

NEURCHMUTNOL. 62:113-117(1995).

1. FUNCTION: INHIBITS NEUROTRANSMITTER RELEASE BY REDUCING CALCIUM ON CURRENTS AND INCREASING POTASSIUM ION CONDUCIANCE. RECEPTOR FOR DYNORPHINS. MAY PLAY A ROLE IN AROUSAL AND REGULATION OF AUTONOMIC AND NEUROBENDORINE FUNCTIONS.

1. SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.

1. ILSSUE SPECIFICITY: BRAIN (NEOCORTEX, HIPPOCAMPUS, ANYGDALA, MEDIAL HABENULA, HYPOTHALAMUS, LOCUS CERULEUS, AND PARABRACHIAL
                                                                                                                                                                                                                                                                  TISSUE-BRAIN;

TISSUE SPECIFICITY: BRAIN. IS EXPRESSED IN THE CEREBRAL CORTEX,
CAUDATE PUTAMEN, NUCLEIS ACCUMBENS, SEPTAL NUCLEI, THALAMUS,
HIPPOCAMPUS, AND HABBULA. NOT DETECTED IN CEREBELLUM.
SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.

-!- FUNCTION: INHIBITS NETGOTRANSMITTER RELEASE BY REDUCING CALCIUM ION CURRENTS AND INCREASING POTASSIUM ION CONDUCTANCE. HIGHLY STEREOSELECTIVE. RECEPTOR FOR ENKEPHALINS.

-!- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.

-!- TISSUE SPECIFICITY: BRAIN, WITH HIGH CONCENTRATIONS IN THE BASAL GANGILA AND LIMBET RECEIVE.

-!- SIMILARITY: BELONGS TO FAMILY I OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                           KIEFFER B.L., BEFORT K., GAVERIAUX-RUFF C., HIRTH C.G.;

-1- FUNCTION: RECEPTOR FOR THE NEUROPEPTIDE NOCIPEPTIN/ORPHANIN FQ.
HAS A POTENTIAL ROLE IN MODULATING A NUMBER OF BRAIN FUNCTIONS, INCLUDING INSTINCTIVE BEHAVIORS AND EMOTIONS. THE ACTIVITY OF THIS RECEPTOR IS MEDIATED BY G PROTEINS WHICH INHIBITS ADENTLYI
                                                                                                                                                                                                                                                                                                                         SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.
SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                   MEDLINE; 94185768.
